ROTOCONTROL Introducing Sensing and Verification System at Labelexpo Europe 2011

Four ROTOCONTROL Machines will be exhibited in Brussels 28 September - 1 October 2011 in Stand 7M105

Ahrensburg, Germany (July 26, 2011) – ROTOCONTROL today announced the SVS (Sensing and Verification System) option will be introduced at Labelexpo Europe 2011 in Brussels, the world's largest event for the label, product decoration, web printing and converting industry. The SVS features powerful algorithms to detect repeated printed images on most material types including clear on clear, IML and butt-cut labels to provide missing label and matrix detection feedback to the machine. Secure sensing technology is key to providing customers with accurate counting.

In Stand 7M105 ROTOCONTROL will also demonstrate leading-edge Finishing technology including the flagship RSC Vertical Inspection Slitter/Rewinder, RSD Die Cutting, and the RSP Single Pass 100% Security Inspection. 100% servo drives from Bosch Rexroth assures precise, automatic tension control and high speed - trademarks of all ROTOCONTROL machines. The RSC Slitter/Rewinder machine will also be demonstrated in the AVT Stand.

Also featured will be the recently announced Vacuum Splice Table option enhancing Operator efficiency by automatically placing mill-splice/flags, matrix/missing labels and vision detected defects right on the vertical inspection plate for reworking.

Marco Aengenvoort, Managing Director of ROTOCONTROL commented: "Our company debut at Labelexpo Europe 2009 was very successful. With over 80 Finishing Machine installations around the world, we are pleased to return two years later to showcase our latest innovative technology and meet with industry-leading Converters. We also look forward to meeting with key Converter Representatives during "Operators Day", organized by FINAT, on Saturday 1 October.

About ROTOCONTROL

ROTOCONTROL designs and manufactures leading edge inspection, slitting, rewinding and die cutting finishing machines for the narrow web industry. Available globally, ROTOCONTROL offers machines from smaller basic rewinders to feature rich, sophisticated models with multiple options. All utilize S-Drive Servo Technology enabling maximum web control for the most delicate film and foil materials. Headquartered in Ahrensburg (Hamburg), Germany ROTOCONTROL maintains the highest level of product quality through ease of use, absolute control and flexibility. ROTOCONTROL is the partner of choice in the finishing of label products.

Speed is Nothing without Control.
