▶ **ROTOCONTROL EDM200 Flexo Machine Successfully installed in South Africa**

Quality labels printed on first day of installation

Ahrensburg, Germany (March 24, 2010) – ROTOCONTROL today announced the successful customer installation of the EDM200 Flexo Machine in South Africa. Onsite to assist with the installation and training was Pascal Aengenvoort, Director from ROTOTEC, the local Agent for ROTOCONTROL throughout South Africa.

▶ “The Installation went very well” states Pascal Aengenvoort. “Our customer was astonished with the outstanding print quality of the labels that were printed on the same day of the installation. It was very easy to train the Operator and the Customer was impressed with the speed and ease of job changeover, the accuracy in putting preprinted labels in register and holding the register throughout the run.”

The EDM200 is the world’s first ever designed semi-rotary, servo-driven UV-flexo machine, using sleeve technology for both print and anilox cylinders, and working with chambered doctor blade technology. The machine is designed to work mainly as an over-printing machine and has been specifically developed to provide very economic production of short-run and fast turnaround for labels, tickets and tags.
