NEWS RELEASE

EMT International Appoints Distribution Partner in Benelux

Albyco is now representing EMT's Chameleon lineup of roll-to-roll and roll-to-sheet finishing systems.

Hobart, Wisconsin USA (September 13, 2021) – EMT International, [a market leader in finishing equipment and transports for the high speed, digital ink jet market](#) has appointed Albyco as its distribution partner for the Netherlands, Belgium, and Luxembourg. Under the agreement, Albyco will locally represent EMT's Chameleon lineup of roll-to-roll and roll-to-sheet finishing systems.

Earlier this year, Albyco was appointed as the local distribution partner of ROTOCONTROL equipment for label finishing, booklet production, and hybrid printing including the ECOLINE suite of cost-effective finishing machines.

Jim Driscoll, VP Sales of EMT International said: "We are pleased to broaden our presence in Europe with Albyco, who has a proven track record of success in the digital graphic and printing industry throughout the Benelux and has already made tremendous headway with our ROTOCONTROL brand."

Headquartered in the Green Bay, WI area EMT designs and manufactures high-quality equipment for the printing, converting and packaging markets. In 2017 EMT acquired ROTOCONTROL (headquartered in Siek, Germany) which added a broad spectrum of premium label finishing machines to their product offering and expanded their manufacturing capacity.

EMT's Chameleon line of finishing equipment offers a complete range of modular dynamic web finishing solutions. Tight or slack web management, in-line, near-line or off-line, Chameleon adapts to specific web processing and finishing needs.

"EMT provides an impressive range of modular equipment for the commercial inkjet market including unwinders, rewinders, chip/cutter, stack/batch, straight sheeter, perforator, punch units as well as a combined punch/perforator unit and coater," said Jos van Uum, managing director at Albyco. "These solutions from a reputable brand fill a gap in Albyco's product portfolio."
