

FOR IMMEDIATE RELEASE

ROTOCONTROL Hosting Open House with Domino and EyeC

The event will take place at ROTOCONTROL in Siek, Germany November 24–25, 2021.

SIEK, Germany (October 21, 2021) – ROTOCONTROL is joining forces with Domino and EyeC to host an open house November 24–25, 2021 at its facility in Siek, Germany. The event will feature a live demonstration of an integrated end-to-end hybrid solution with the ROTOCONTROL DT 2.0 label finishing machine, [Domino's N610i inkjet label press](#), and the [EyeC ProofRunner Web](#) in-line inspection system.

"Visitors to our open house will witness a comprehensive hybrid solution in flexo and digital label printing, inspection, and finishing with a magnitude of features unrivalled in the industry," said Marco Aengenvoort, ROTOCONTROL managing director.

Hybrid solution

Features of the highly modular hybrid solution include multiple die-cutting stations, rotary flexo and flatbed screen printing units, up to seven colours including opaque white, with 600dpi native print resolution, combining the productivity of flexo printing with the flexibility offered by rapid job change digital technology. The N610i integration module incorporates Domino's renowned, automated, **i-Tech** intelligent Technology productivity features for enhanced flexibility and reliability.

ECOLINE RSI with the EyeC ProofRunner Web

Other capabilities included in the hybrid line are lamination, cold foiling, hot stamping, label inspection with 100% outgoing quality control, corona treatment, UV LED curing, and a small roll programmable auto turret winding machine.

Ruud Bos, Domino's DP OEM Manager Europe, said "We are delighted to be working with ROTOCONTROL and EyeC at this open house. This is a highly efficient method to print labels in one-pass combining digital printing with embellishments and in-line inspection. It is a single efficient process from white reel input, to outputting finished inspected labels, enabling the label converter to support short lead times, and also improve their environmental credentials through reducing material waste normally associated with multiple processes."

Demonstrated on the running hybrid solution will be various types of high-quality printed labels with quick job changeovers. Label Printers who wish to attend the open house are invited to send their print files and material in advance for the live demonstration.

Two ECOLINE RSI label finishing machines will also be showcased during the open house featuring the Domino **K600i** ink jet printer for barcode and QR code printing and the EyeC ProofRunner Web and Quality Link system.

Registration for the event is available [here](#).

About Rotocontrol International GmbH

ROTOCONTROL, a wholly owned subsidiary of EMT International (www.emtinternational.com), designs and manufactures leading-edge finishing machines for label inspection, slitting, rewinding, die-cutting, overprinting, digital and booklet printed labels, for converters in the narrow web industry. Available globally, ROTOCONTROL offers machines from smaller basic rewinders to feature-rich, sophisticated models with multiple options featuring S-Drive servo technology enabling maximum web control for the most delicate film and foil materials.

With facilities in Germany and the USA, ROTOCONTROL maintains the highest level of product quality through ease of use, absolute control and flexibility with a focus on operator safety and efficiency. A large customer support team is based at both facilities providing 24x7 remote service. ROTOCONTROL is the partner of choice in the finishing of label products.
