

FOR IMMEDIATE RELEASE

ROTOCONTROL Welcomed Visitors to Germany for a Two-Day Open House

The event took place November 24–25, 2021 alongside partners Domino Digital Printing Solutions, EyeC, and Phoseon

SIEK, Germany (December 9, 2021) – ROTOCONTROL joined forces with Domino Digital Printing Solutions, EyeC, and Phoseon to host an open house November 24–25, 2021 at its facility in Siek, Germany. The event featured a live demonstration of an integrated end-to-end digital ink jet hybrid solution with the ROTOCONTROL DT 2.0 label finishing machine, [Domino's N610i](#) label press, the [EyeC ProofRunner Web](#) in-line inspection system, and [Phoseon's Nexus ONE™](#) UV LED curing solution.

"We were pleased to welcome over 60 guests during our two-day open house including customers, suppliers, and ROTOCONTROL partners," said Marco Aengenvoort, ROTOCONTROL managing director. "Unfortunately, due to the coronavirus situation several registrants canceled at the last minute. But our demo center remains open for anyone wishing an on-site or virtual demonstration of our finishing machines."

Marco Aengenvoort, Daniel Guette, and Artur Gondek from ROTOCONTROL

Features of the running hybrid solution included multiple die-cutting stations, rotary flexo and flatbed screen printing units, up to seven colours including opaque white, with 600dpi native print resolution, combining the productivity of flexo printing with the flexibility offered by rapid job change digital technology. The **N610i** integration module incorporates Domino's renowned, automated, **i-Tech** intelligent Technology productivity features for enhanced flexibility and reliability.

Other capabilities visitors were shown in the hybrid line include lamination, cold foiling, hot stamping, label inspection with 100% outgoing quality control, corona treatment, UV LED curing, and a small roll programmable auto turret winding machine.

Two ECOLINE RSI label finishing machines were also showcased during the open house featuring the Domino **K600i** ink jet printer for barcode and QR code printing, the Phoseon FJ240 high dose UV LED curing solution, and the EyeC ProofRunner Web inspection system including variable code reading. Also demonstrated was the EyeC Quality Manager system which allows data automatically exported from the press inspection system to be evaluated before releasing it to the rewinder, avoiding unnecessary stops. The EyeC Finishing Manager software controlling the rewinder then uses the released data to automatically stop and place the defect when the operator needs to remove faulty material.

Also in the demo showroom is the RCF, a high-quality slitting machine that can be custom-built with a range of options for the finishing of blank labels, multi-layer labels, blister foils, RFID

smart tickets/labels and more, and the advanced RSC 2.0 inspection slitter/rewinder machine. Punching and slitting modules from EMT were on display and Actega's coatings were also presented providing functional, visual and haptic effects for one-sided or two-sided finishing.

On Friday, November 26th an in-depth video of the end-to-end digital ink jet hybrid solution was filmed, in addition to videos of the two ECOLINE RSI label finishing machines and live drone footage captured during the open house.

The hybrid solution with the ROTOCONTROL DT 2.0 label finishing machine and Domino's N610i label press has been sold and will soon be shipping to the United States. A replacement demo is expected to be available in early 2022.

About Rotocontrol International GmbH

ROTOCONTROL, a wholly owned subsidiary of EMT International (www.emtinternational.com), designs and manufactures leading-edge finishing machines for label inspection, slitting, rewinding, die-cutting, overprinting, digital and booklet printed labels, for converters in the narrow web industry. Available globally, ROTOCONTROL offers machines from smaller basic rewinders to feature-rich, sophisticated models with multiple options featuring S-Drive servo technology enabling maximum web control for the most delicate film and foil materials.

With facilities in Germany and the USA, ROTOCONTROL maintains the highest level of product quality through ease of use, absolute control and flexibility with a focus on operator safety and efficiency. A large customer support team is based at both facilities providing 24x7 remote service. ROTOCONTROL is the partner of choice in the finishing of label products.
